Adjustment of shelves to existing structural ceiling

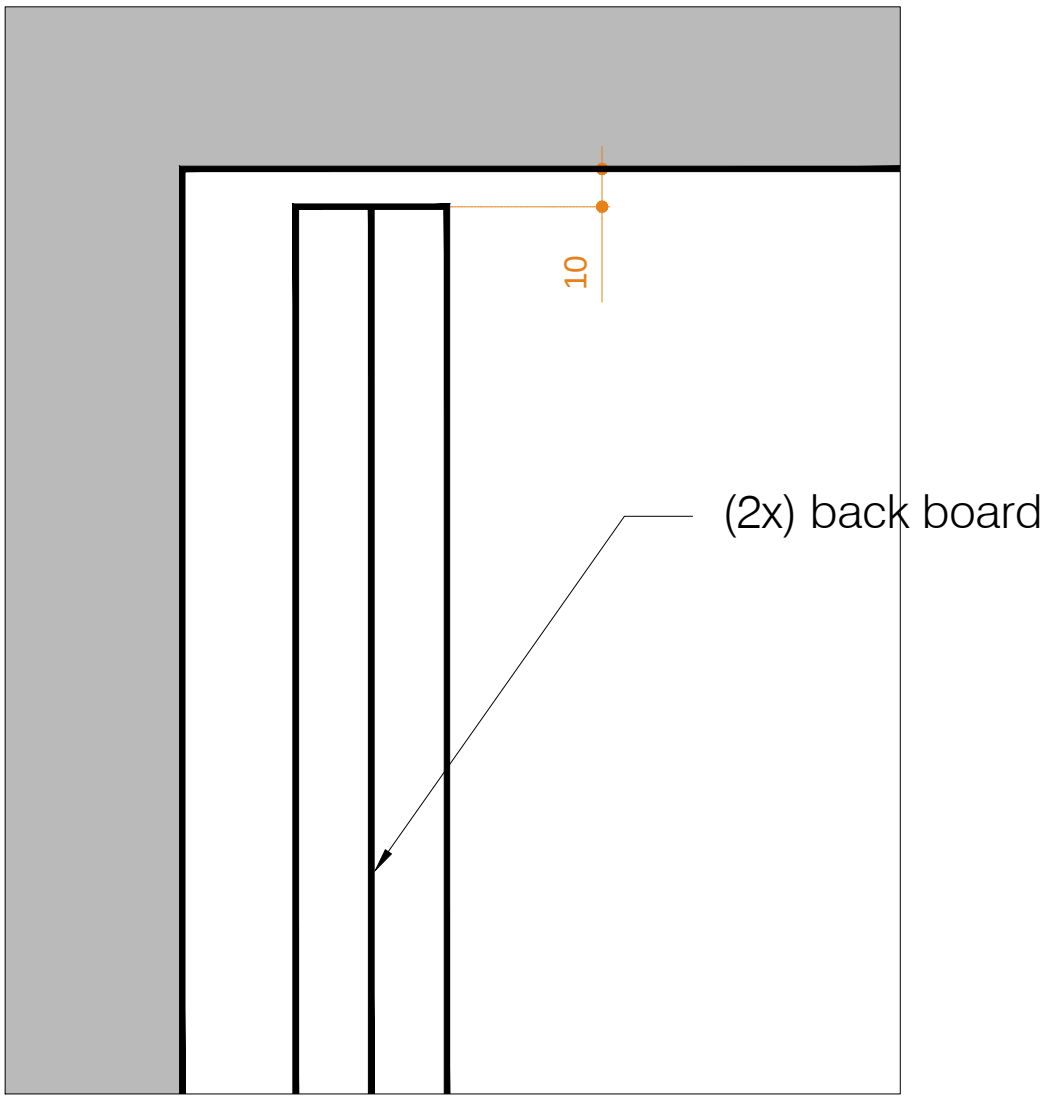

The top part of the shelves will adapt to the shape of the **structural** ceiling behind the existing **suspended** ceiling.

Given that this shape will be unknown until the construction works begin, the shelves have been drawn 1 meter higher than the existing **suspended** ceiling and they will be cut on site to adapt to the **structural** ceiling shape.

When cutting the shelves, the 3 following conditions must be fulfilled:

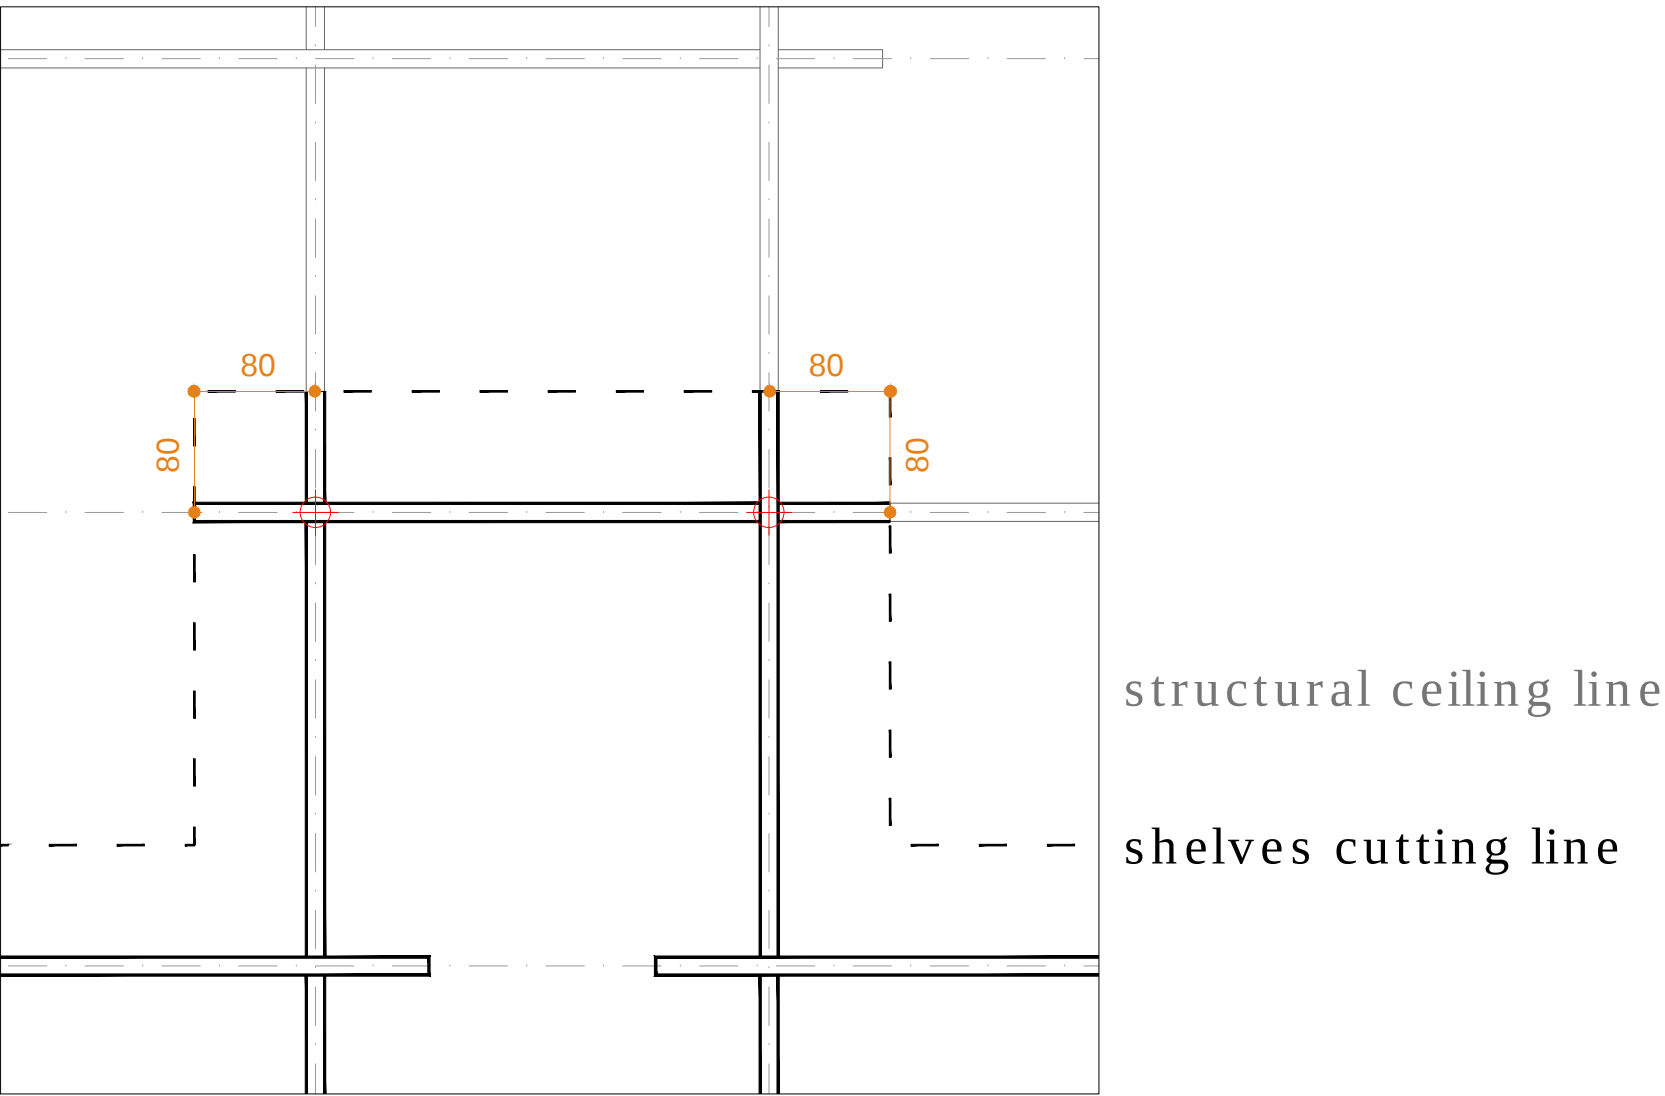

1

The back boards must keep a distance of 10mm to the **structural** ceiling

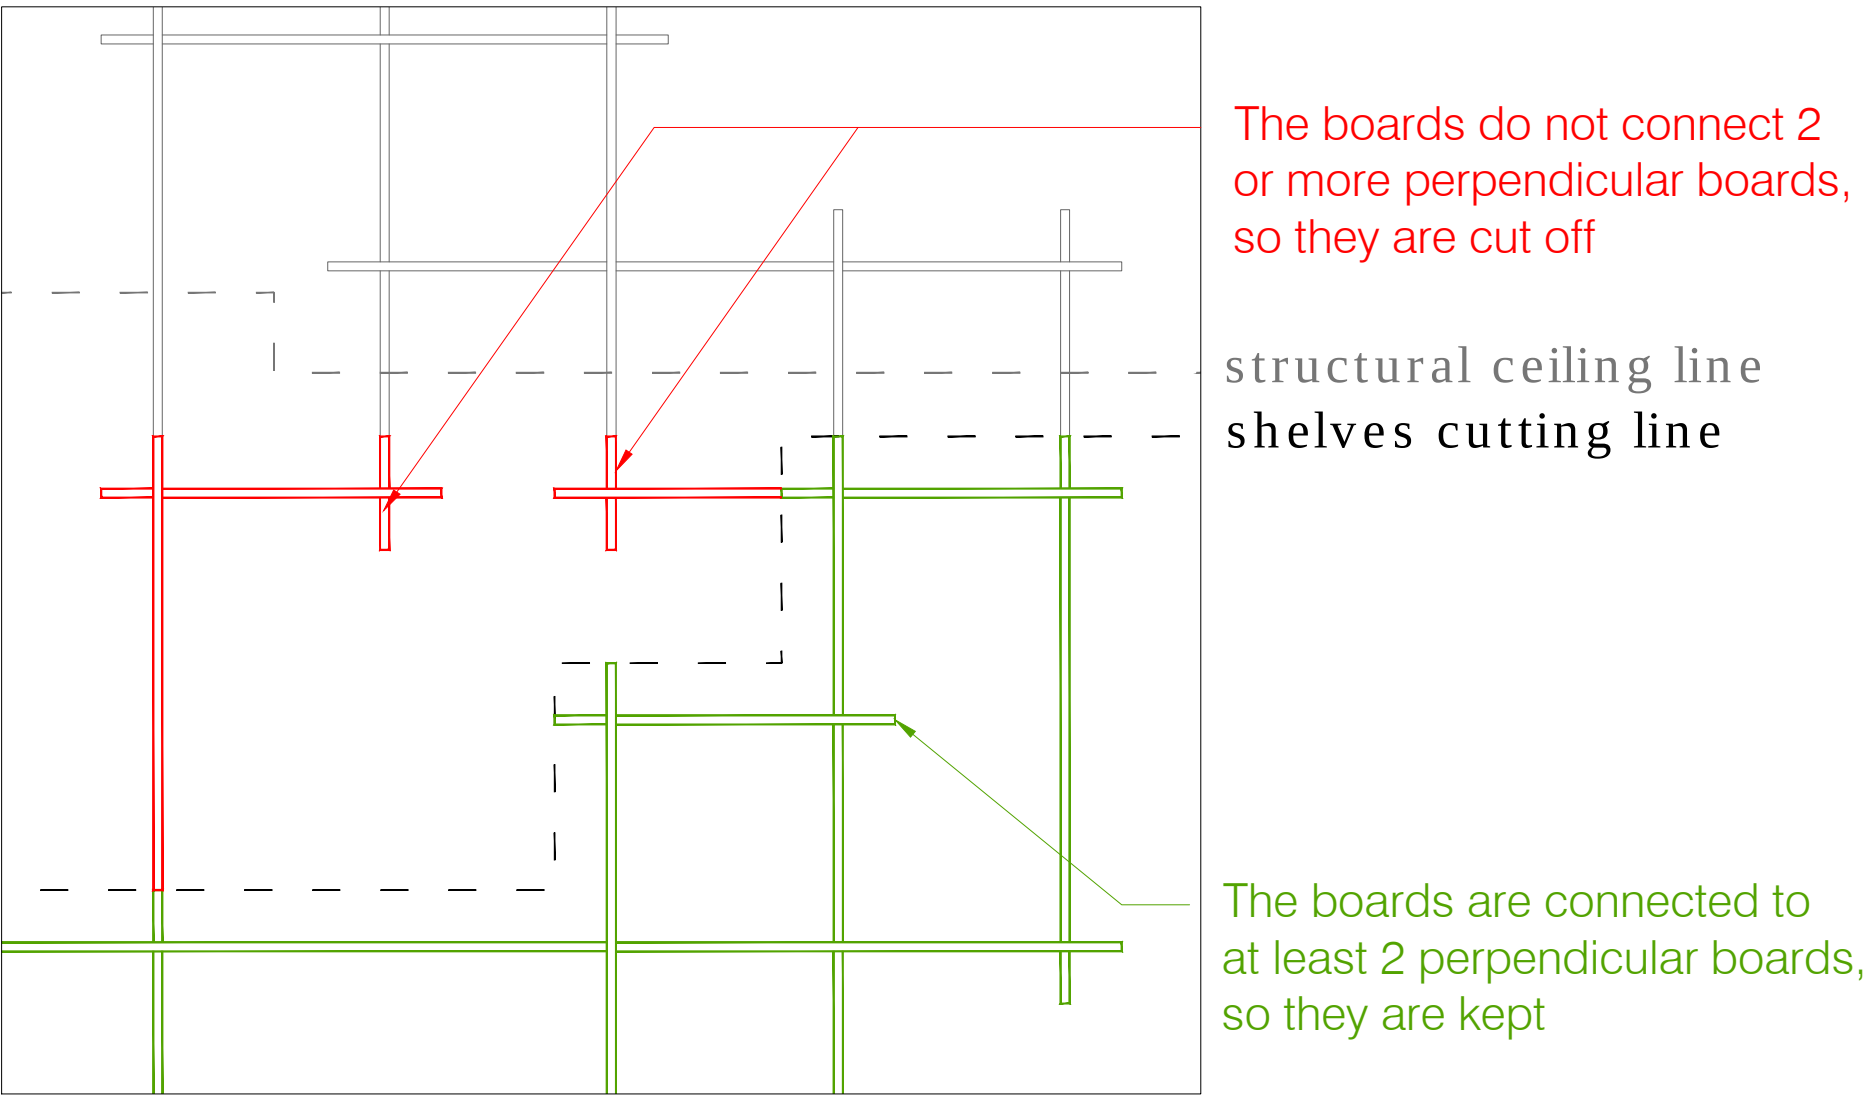

2

The shelves must be cut at 80 mm from the joints **axis** and should be as close as possible to the existing **structural** ceiling

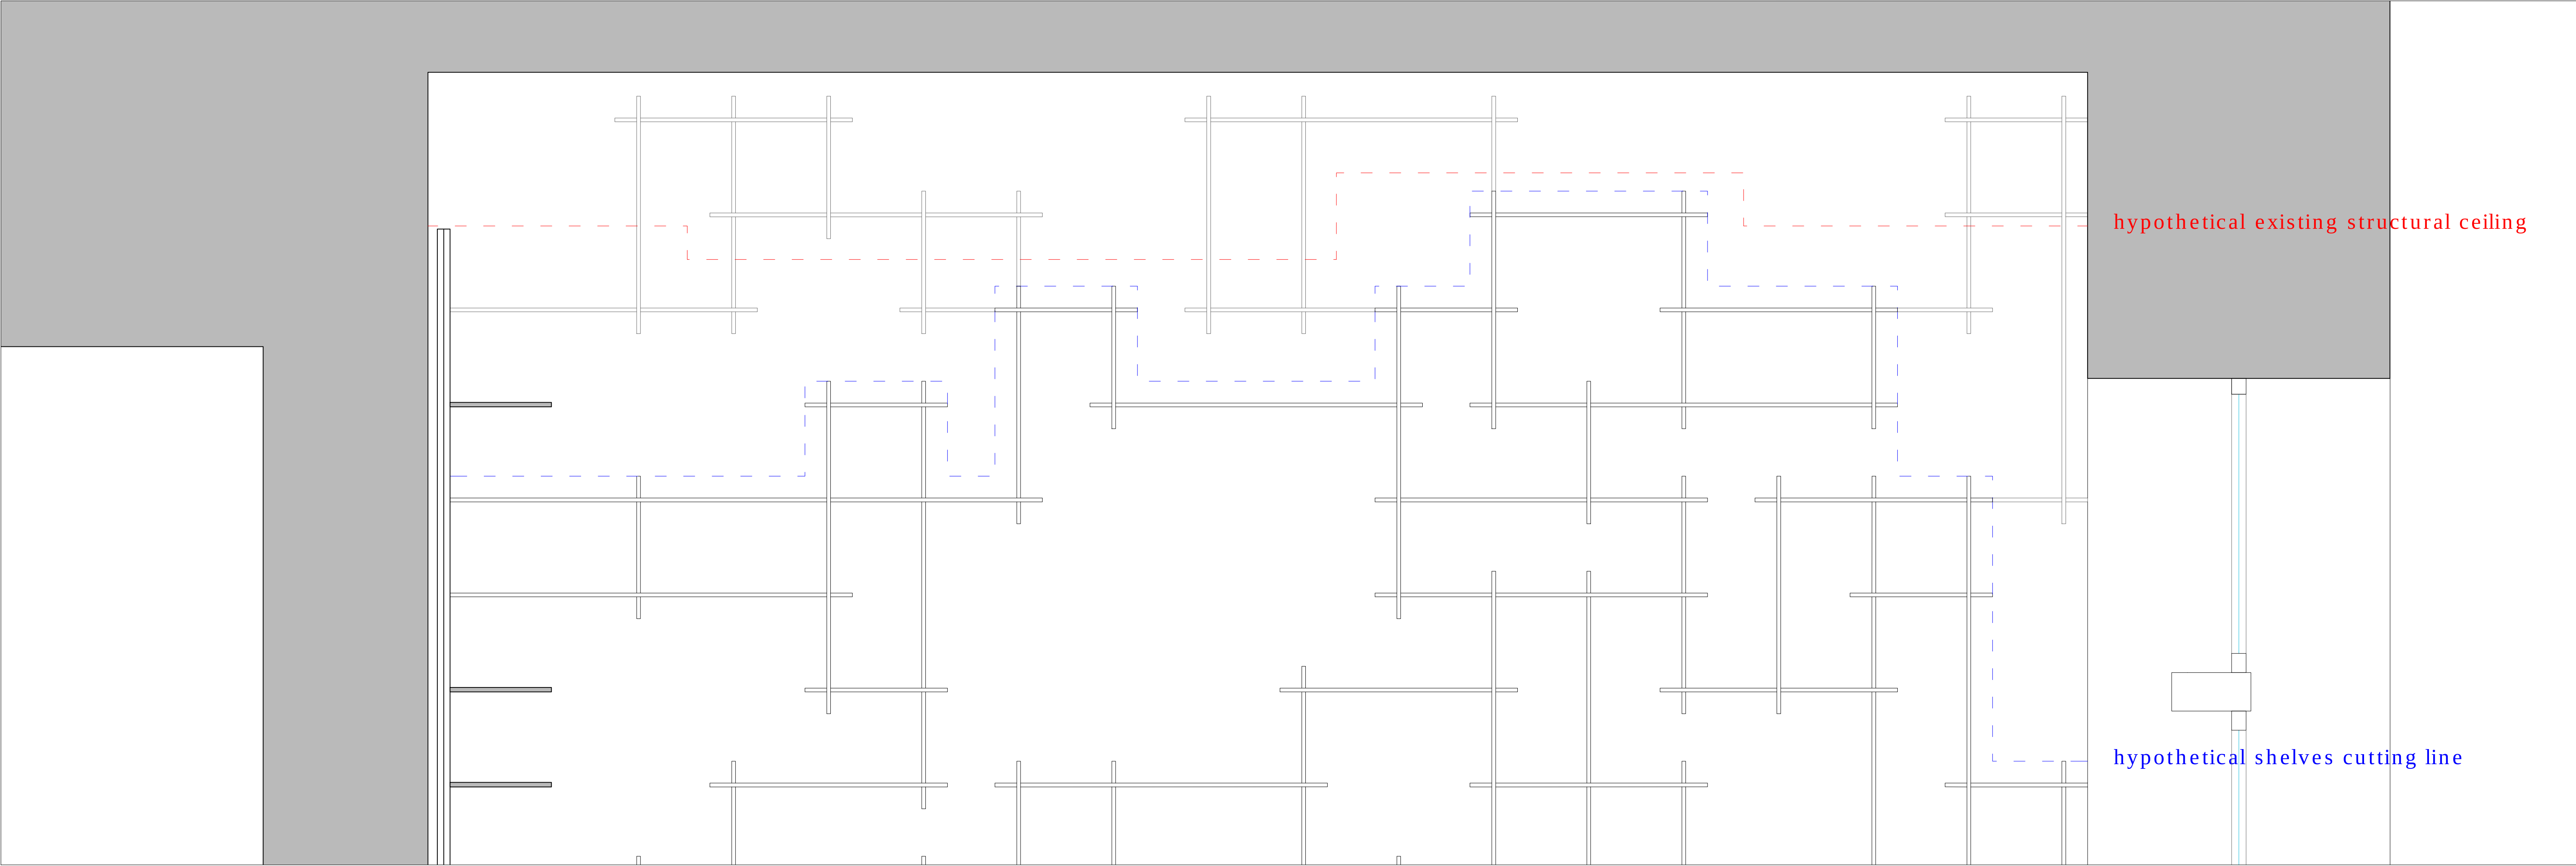

3

A board must be connected to at least 2 perpendicular boards

Shelves adjustment example
